

Contents

Chapter 1.	Euclid's Geometry
1.1	Euclid's postulates and common notions
1.2	Using logic.....
1.3	Notation and measurement.....
1.4	Polygons and solids.....
1.5	Measuring the earth's radius.....
1.6	Functions and graphing
Chapter 2.	Congruent Figures, Areas and Volumes
2.1	Congruent triangles.....
2.2	Parallel lines.....
2.3	Quadrilaterals.....
2.4	Areas of figures.....
2.5	Circles.....
2.6	Volumes and surface areas
Chapter 3.	Similarity
3.1	Similar Polygons.....
3.2	Applications of similar triangles.....
3.3	Pythagorean Theorem.....
3.4.	Areas and perimeters of similar figures.....
3.5	Similarity for more general figures.....
Chapter 4.	Rigid Motions and Symmetry
4.1	Reflections over lines and orientation.....
4.2	Translations, rotations, and glide-reflections.....
4.3	Symmetries.....
4.4	Isometries in space
Chapter 5.	Vectors and Transformations
5.1	Vectors as oriented line segments.....
5.2	Representing vectors with coordinates.....
5.3	Matrices.....
5.4	Transformations using matrices.....
5.5	Isometries using matrices.....
5.6	Isometries using complex numbers
Chapter 6.	Three Other Geometries
5.1	Spherical Geometry
5.2	Hyperbolic Geometry
5.3	Taxicab Geometry
Appendix I	Selected PSSM Standards
Appendix II	Euclid's Assumptions.....
Appendix III	Selected Geometry Formulas
Glossary
